

# VCALL FEATURES

## ROBUST FEATURES ENGAGE YOUR AUDIENCE

Vcall offers industry-leading interactive features that get your audience's attention. Gain valuable feedback and tailor your events to your attendees' needs with fully customizable surveys, polls, and quizzes.

**Opinion Poll** – Create polling questions set up as single-choice or all-that-apply. Results can be displayed to your audience immediately as a bar-chart or a pie-chart. Polls can be stored in a library for re-use in other events.

**Survey** – Create and publish a survey or evaluation form with unlimited answer; multiple-choice, yes/no, and open-ended questions. Reports allow the presenter to summarize evaluations by date or across dates to see trends.

**VChart™** – Turn the presentation area into a virtual flip chart. The presenter posts an open-ended question, then publishes all or a selection of participant responses (either anonymously or with names). Unlimited responses (even those from previous sessions) can be published and republished during the current session or published in future sessions.

**Brainstormer™** – Turn the web conference presentation area into a brainstorming session. Participants can add their ideas to the screen and respond to previous posts creating discussion threads for multiple ideas.

**Pro/Con** – Similar to VChart, the presenter offers participants a choice to discuss. Participants respond in two fields with the pros and cons.

**Certifier™** – A robust testing tool that scores tests automatically. If desired, the results can be displayed to students along with remediation. An administrator can view individual and group results.

**QuickPic** – Turns any graphic image or document into a picture that can be displayed in either the showcase or presentation area.

**QuickLink** – A tool that lets presenters link to any file on the Internet. Publish web pages, Flash content, PDFs, audio & video files, pictures, charts and more to either the presentation area or showcase area.
